

## Project Accomplishments

The 2025 Regional Transportation Plan is the third in a series of transportation plans. The first plan, “Transportation Futures 2010” was written in 1993 and updated in 1998 with “TransAction 2020.” These plans laid the foundation for a \$309 million investment in transportation projects in the region from 1993 through 2001. This includes completed projects (60%), projects underway, and projects with committed funding. Federal, state and local sources contributed roughly equal shares to finance these investments. The largest investments were in capacity, maintenance, preservation and replacement projects. Safety, efficiency and non-motorized capacity projects also received substantial investments.

In the period from 1993 through 2001, 341 projects were initiated, as listed in Table J-1. Private development contributed to many of these projects and completed other local improvements not reflected in the project total. Of these projects, 112 included bike and pedestrian improvements. The 39 regionally significant projects identified in “Transportation Futures 2010” and/or “TransAction 2020” represents a \$140 million investment.
